APPENDIX 1		Classes of Industry	
APPENDIX 2		Schedule B	

INTRODUCTION

This publication presents statistical information on industrial disease claims. The purpose of the publication is to describe the extent and the nature of these claims so that those involved in the prevention of industrial disease can more efficiently direct their efforts. The publication has been produced through the combined efforts of three WCB departments: Occupational Health, Industrial Hygiene and Statistical Services.

DATA BASE

This publication shows statistics on claims for industrial disease that were accepted for wage loss; it does not show statistics on claims that were accepted for medical expense but involved no time lost from work or on claims that were not accepted. The wage-loss claims are shown by the year in which the claim was accepted.

According to the Workers' Compensation Act of British Columbia[1], and the Board's Reporter Decision No. 326[2], there are two requirements to be satisfied before a claim for industrial disease is accepted. The first is that the condition is an "industrial disease", which we also refer to as occupational disease in this publication, and the second is that it has been caused by the claimant's work.

Section 1 of Workers' Compensation Act of British Columbia[1] defines industrial disease as ". . . any disease mentioned in Schedule B and any other disease which the Board by regulation or otherwise may designate or recognize as an industrial disease, and 'disease' includes disablement resulting from exposure to contamination".

Schedule B is shown as Appendix 2. It lists a series of diseases and corresponding occupations or industries. If a person has one of the diseases listed in Schedule B, and is employed in the occupation or industry corresponding to the disease, then the Board presumes that the disease was caused by the person's employment[2]. Cases not falling under Schedule B are judged individually on their merit, or by the Board making an appropriate regulation[2].

Some of the tables in the publication show statistics for individual subclasses of industry. Appendix 1 is a description of the meaning of the subclass numbers.

CHANGE IN CODING PROCEDURES

Traumatic tenosynovitis cases (resulting from a blow) were classified as tenosynovitis and therefore included in this report for 1987, 1988, 1989 and 1990 but were classified as injuries and therefore not included in this report for 1986.

OTHER DATA

The policy of the Board is to supply information about the claims experience for individual firms to anyone with a direct interest in the occupational health and safety at that firm. This includes members of the safety committee, the management and the union representing the workers at the firm. Requests for statistics on occupational diseases for individual firms should be sent in writing to Statistical Services, Workers' Compensation Board, 6951 Westminster Highway, Richmond, B.C., V7C 1C6.

[2] Subclasses with less than five claims, and the federal government subclass, are not shown individually, but are included in the "OTHER" row.

[3] Includes bursitis cases caused by contact with physical agents. Traumatic tenosynovitis cases (resulting from a blow) were classified as tenosynovitis and therefore included in this report for 1987, 1988 and 1989, but were classified as injuries and therefore not included in this report for 1985 and 1986. The exposure category for these claims is "physical agents, other".

1 Includes bursitis cases caused by contact with physical agents. Traumatic tenosynovitis cases (resulting from a blow) were classified as tenosynovitis and therefore included in this report for 1987, 1988, 1989 and 1990, but were classified as injuries and therefore not included in this report for 1986. The exposure category for these claims is "physical agents, other".

2 Includes some paint cases in 1986.

3 Includes bleach.

4 Excludes bleach.

5 Excludes some paint cases in 1986.

---

[1] Some of the cancer claims for mesothelioma in this table are shown in Table 3 as pneumoconiosis claims arising from exposure to asbestos. (These are claims first accepted as pneumoconiosis which are also accepted subsequently for cancer.)

[2] Refer to Appendix IV for a description of the subclasses.

[3] All subclasses where there has been exposure are shown.
